

QUICK NOTES:

Third size down from the top is the template size in the video. It is used on a #2 Tiemco 8089, which is the equivalent of a Gamakatsu B10S #2/0. As you can see, [hook sizes vary and are more or less meaningless](#). Use the hook that works for your purposes. Also, because these flies are so wide, I stick to the small sizes. I don't even want to mess around with casting that top template, which is a mini Frisbee. Enjoy the templates, and pick up the other ones for [tying crabs](#) and other baitfish, like [shad](#).
